"Purity is a human right"

ROOFTOP SOLAR AND EV CHARGING INFRASTRUCTURE

Governments worldwide are being urged to set **Net Zero emissions targets and timelines** and to explore alternative energy sources for their energy and transportation needs, in order to tackle the urgent challenge of climate change.

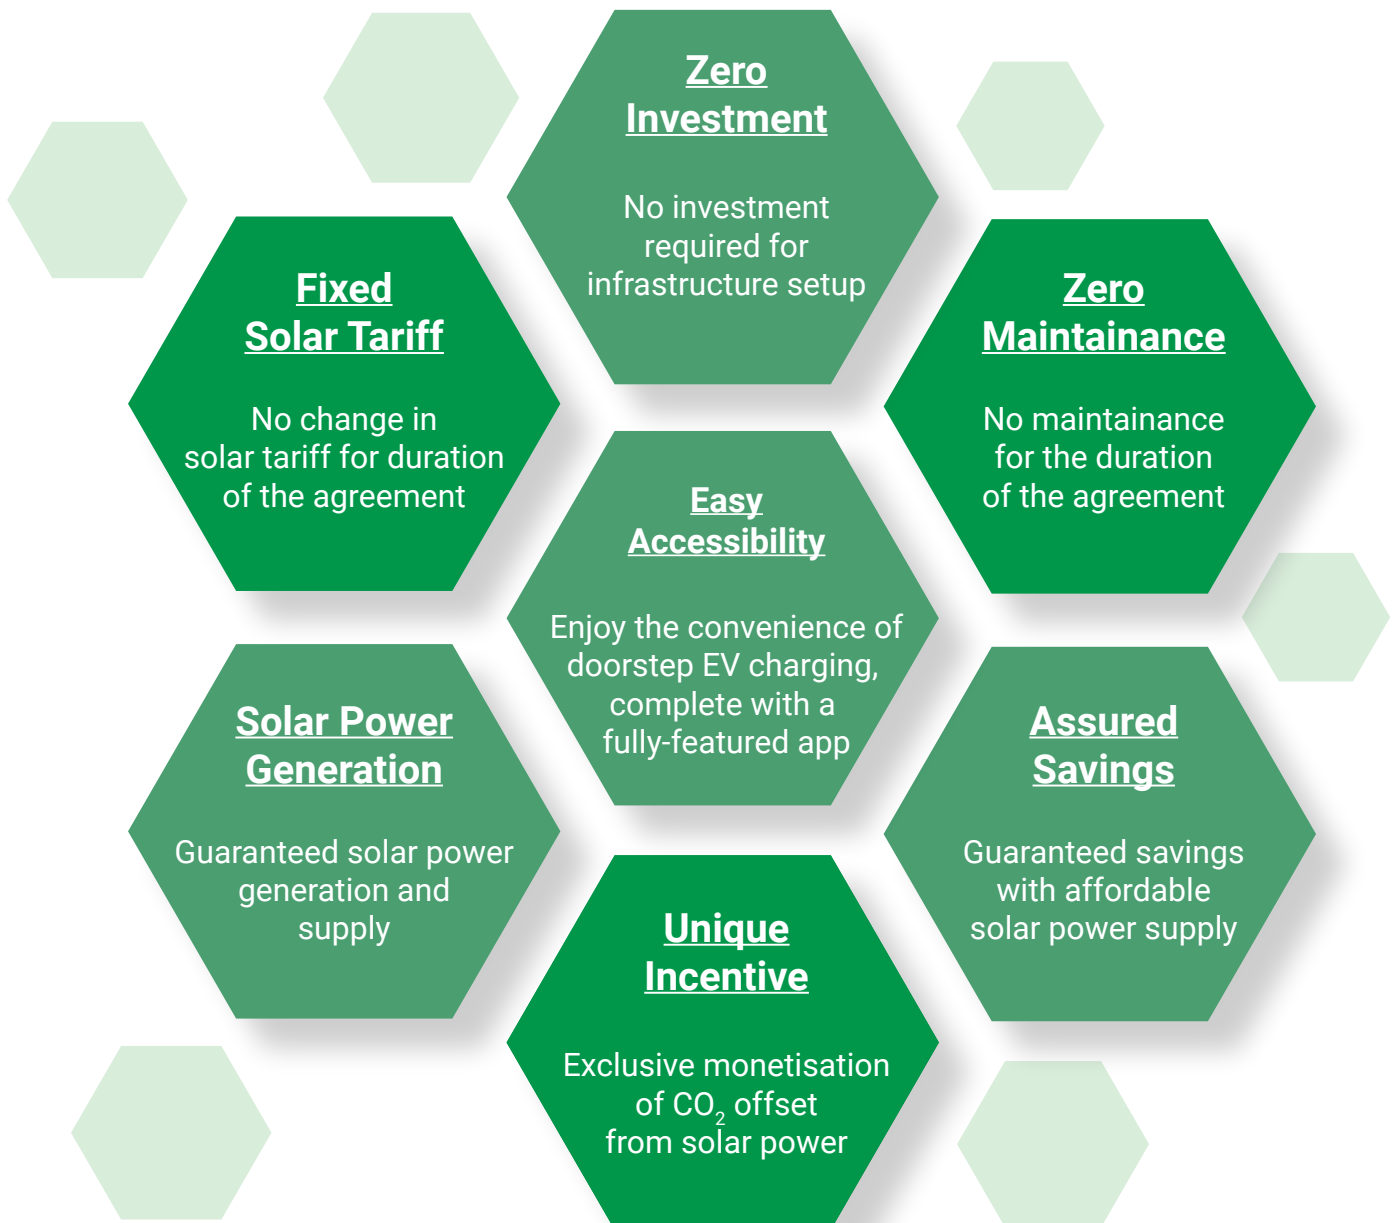

GreenShift, a dedicated startup, aims to reduce 10 million tonnes of greenhouse gases by 2030. Our mission is to raise awareness about the harmful effects of climate change and to encourage communities to adopt solar energy and electric mobility—key solutions for reducing air pollution and combating global warming.

About Us

GreenShift has structured an exclusive Partner Program tailored for residential and commercial establishments. This program features a 'Zero Investment and Zero Maintenance' plan, providing the installation of rooftop solar power system with **guaranteed clean energy supplies and monthly savings on energy bills**. Additionally, it includes the setup of slow and fast charging stations to cater the entire range of electric vehicles.
